

## PRODUCT CARD

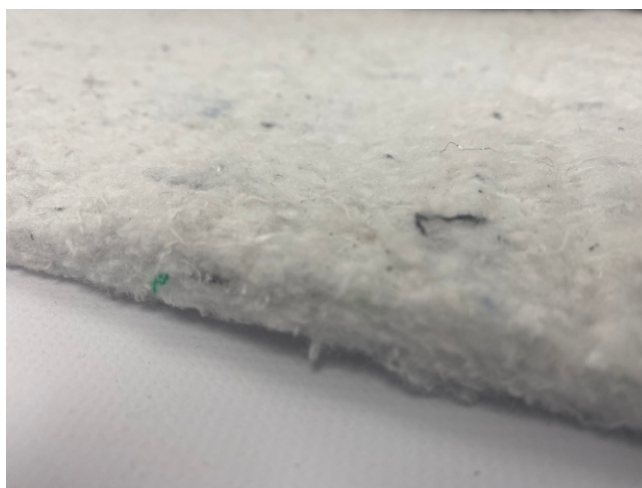

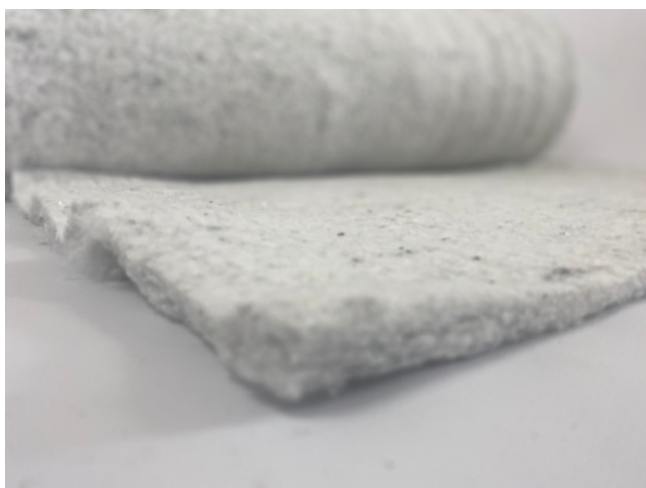

# GREENFOND RRM vegetation mat

GREENFOND RRM light substrate for green roofs produced on the basis of hygroscopic natural and polyester fibers.

GREENFOND RRM vegetative mineral mat for extensive roofs is a lightweight base for green roofs, produced on the basis of hygroscopic natural and polyester fibers, thanks to which it is resistant to the formation of fungi. The structure of the mat is specially needed to create a compact and dimensionally stable product.

GREENFOND RRM provides an excellent level of water retention and high performance parameters for a green roof such as optimal water balance and adequate ventilation. Due to its properties, it is a very good fire protection and effectively suppresses noise. It is supplied in the form of a roll, which significantly facilitates its installation on the roof.

The product complies with the FLL guidelines.

## PRODUCT CARD

# GREENFOND RRM vegetation mat

### TECHNICAL DATA OF THE PRODUCT:

Format	roll
Thickness	25 mm
Roll weight	15 kg
Roll dimension	1 x 15 = 15m <sup>2</sup>
Water absorption	11 l/m <sup>2</sup>
Weight of the dry product	1 kg/m <sup>2</sup>
Weight of the wet product	12 kg/m <sup>2</sup>
The quantity on the palette	12 rolls
Art. No.	30.1015

### ADVANTAGES OF THE GREENFOND ROOF GREEN SYSTEM

sustainable  
development

high water  
absorption

lightness

high thermal  
insulation

complete  
solution

high fire  
protection

easy assembly

high sound  
insulation
