GREENFOND

SEDUM MATT TUNDRA R stonecrop mat

GREENFOND SEDUM MATT TUNDRA R stonecrop mat- a mixture of stonecrops appropriately selected in the form of a roll matt for use on green roofs.

GREENFOND SEDUM TUNDRA MATT R contains ten to twelve different types of Sedum. The plants are grown on a coir fibre mat and a substrate. Sedum is a succulent plant that is well able to store water in its leaves and therefore grows perfectly under diverse weather conditions.

GREENFOND SEDUM TUNDRA MATT R ready-made stonecrop mat is a guarantee of a spectacular extensive green roof just after unfolding, which cannot be obtained by traditional sowing with stonecrop shoots or planting of seedlings from multiplates. Regardless of the harsh weather conditions or lack of care in the first growth phase as in the traditional method of sowing or planting of seedlings, our mat does not extend the waiting time for the desired effect. Another advantage is that buying the mat we guarantee that it is exactly the type you have chosen, with regular density of plants and what is more, devoid of weeds and other impurities. This gives measurable benefits in the form of time and financial savings for additional care treatments.

Another advantage is that by buying a mat in rolls, we guarantee that it is exactly the type you have chosen, with regular density of plants and what is more, devoid of weeds and other impurities. This gives measurable benefits in the form of time and financial savings for additional care treatments.

The GREENFOND sedum mats are manufactured in accordance with the FFL guidelines.

RECOMMENDATION AND UTILIZATION RECOMMENDATIONS

The extensively green roof practically requires small expenditures and care treatments.

Mainly, maintenance work is limited to removal of weeds and pollutants brought by the wind and periodic application of the fertilizer.

In addition, stonecrop plants are appropriately strong, so they are also not damaged when walking on them during these treatments.

Recommendations immediately after installation

In the initial phase, the stonecrop mat requires a sufficient amount of moisture, so after finishing the assembly works, it should be gently watered and then it should be monitored regularly for one month. If necessary, water it periodically, especially during warm and dry periods.

Regular annual care treatments

The green roof made with the use of the mat should be inspected at least once a year, checking the presence of weeds and seeds brought by the wind and removing them by hand. It is best to carry out this treatment in spring, before weeds begin to flower. To preserve the natural development of plant biodiversity, the use of chemical pesticides is not recommended. The amount of greenery located near the roof affects the frequency of green roof control. The control activities also include checking the correct functioning of the drainage system. The works consist in removing contaminants that are found in gutters and outflows, i.e. leaves, branches, etc.

Fertilization

We recommend the use of properly selected GREENFOND Ultra Green fertilizer, periodically every 12 months. The fertilizer is best used in spring, i.e. in April or May. This treatment particularly applies to green roofs made in lightweight construction technology.

TECHNICAL DATA OF THE PRODUCT:

Product type	Stonecrop mat in a roll
Roll dimensions	0,6 x 2 /1,2 m ²
Thickness	2-4 cm substrate + plants
Quantity per palette	50 m ²
Pallet weight	approx. 1000 kg
Article number	351205-2

PRODUCT SHEET

GREENFOND

SEDUM MATT TUNDRA R - assortment

SEDUM ACRE

Foliage colour

English name: Biting stonecrop
Flowering period: June -July
Flower colour: Yellow

Flower colour

Type: Evergreen perennial
Maximum height: 5 to 10 cm
Growing place: Sun

SEDUM ALBUM 'MURALE'

Foliage colour

English name: White stonecrop
Flowering period: June -July
Flower colour: White, pale pink

Flower colour

Type: Perennial
Maximum height: Approx. 10 cm
Growing place: Sun, partial shade
